TO ALL CUSTOMERS

OBJECT: Railway Industry Substance List issued by UNIFE. Restriction for use of dangerous substances.

The Railway Industry Substance List issued by UNIFE provides a comprehensive and accurate list of the prohibited and declarable chemicals used specifically by the railway industry. The overarching objective of this database is to provide information to suppliers and sub-suppliers on materials and substances that are prohibited by European and international legislation. The list defines and categorizes substances and furthermore provides the locale of where restrictions must be considered. First initiated as a result of the European REACH regulation (EC 1907/2006) that entered into force on 1st June 2007, the list will help users to comply with the regulation's legal provisions for manufacturers, downstream users and importers of substances. The UNIFE Topical Group has furthermore extended the legal scope outside Europe to include Canada, China, and the USA.

This is to confirm that, the Group Fixi declares that the Stainless materials supplied by us do not contain substances dangerous for the environment and are therefore in line and are compliant with the current version to date of The Railway Industry Substance List issued by UNIFE.

Yours Faithfully
